

# CEASE-FIRE

Double-barred secondary loading safety that immobilizes the trigger and jaws until you are ready to shoot. After that, it's Game Over!

Auto-flip magnetic safety resets every time the bow is cocked. Bolt sensor resets safety when bolt is removed.

Double jaw string capture for reliable string release in any weather condition

Less than 3 lb. trigger pull with under .015" travel

Most crossbows have a single jaw holding the string at full draw. Our Kill Switch trigger uses two jaws that come together in the center, creating a smoother, faster string release. The StrykeZone 350 is a 135 lb. bow with 15% let-off. The Kill Switch™ trigger pull is independent of the holding weight of the bow, so that even though you are holding almost 115 lbs, you can touch it off with only 3 lbs. of trigger pull and .015" of travel distance. Very little motion results in killer accuracy. Game Over.
